1. GARMENT CONSTRUCTION

ITEM	REQUIRED SPECIFICATION
Garment	Premium short-sleeve staff polo; professional corporate cut, not a sports jersey.
Fabric	Breathable moisture-wicking polyester pique, 180-220 gsm, wrinkle-resistant and colourfast.
Main body	White.
Side panels	SAFEBOX green, running from underarm to lower hem on both sides.
Piping	Thin black piping separating the green side panels from the white body.
Collar / placket	White collar; green inside collar and green inner placket accent; three white buttons.
Sleeve cuffs	White cuff with one green stripe and one black stripe.
Fit	Modern professional fit. Supplier must provide male and female size samples or size chart before order.
Finish	Straight stitching, no loose threads, no puckering around embroidery or transfers.

2. LOGO PLACEMENT

Front - left chest: Use the SAFEBOX wordmark with the small worker/storage-unit icon positioned above it as shown in the approved mockup. Finished artwork area approximately 90-105 mm wide. Keep it level and centred on the left chest. No website and no “SELF STORAGE” line on the front.

Back - centred: Use the complete official SAFEBOX logo: storage unit, worker, SAFEBOX, SELF STORAGE and GoSafeBox.com. Target width 240-260 mm, centred horizontally and positioned below the collar. Preserve the exact aspect ratio. Do not stretch, compress, redraw, retype or alter any element.

Sleeves: No extra sleeve logo is required in the final design unless approved in writing after the first physical sample.

3. DECORATION METHOD

Front: High-quality embroidery preferred. Because the small icon contains fine detail, the supplier must submit a stitch simulation. If detail is not clean, use premium heat-transfer/DTF for the complete front mark instead of simplifying the logo.

Back: Premium DTF, screen print or equivalent full-colour transfer suitable for repeated commercial washing. Minimum source resolution 300 dpi at final print size. A vector redraw may be prepared only by tracing the supplied official artwork without changing proportions or colours.

4. QUALITY & APPROVAL

- Produce one complete size-L physical sample before bulk production.
- Send clear front, back and close-up photographs plus actual measurements of both logos.
- Logo placement tolerance: +/- 3 mm. Colour must remain consistent across the production run.
- No bulk production until written approval of the physical sample.
- Print/transfer must not crack, peel or fade after normal washing; supplier to state its wash guarantee.

5. OFFICIAL ARTWORK & COLOURS

The actual reference artwork supplied by SAFEBOX is included in the accompanying Artwork folder. These files are the visual source of truth. Do not use AI-generated mockup logos for production.

COMPLETE BACK LOGO

WORKER ICON

COLOUR	HEX	RGB	PRODUCTION NOTE
SAFEBOX Green	#61993B	97 / 153 / 59	Primary brand reference. Supplier must colour-match from a physical or printed proof before production.
Black	#000000	0 / 0 / 0	Wordmark, outlines and piping.
White	#FFFFFF	255 / 255 / 255	Main garment body and negative-space logo details.
Box Gold	Use supplied artwork	Use supplied artwork	Do not recolour the box. Match directly from the official logo artwork.

6. FILES INCLUDED

SAFEBOX_Full_Logo_Official_Reference.png, SAFEBOX_Worker_Icon_Official_Reference.png and SAFEBOX_Polo_Approved_Mockup.png.

IMPORTANT FOR THE PRINT SHOP: These are high-resolution raster references. Before mass production, submit a final vector production proof (AI, EPS, SVG or vector PDF) for SAFEBOX approval. Do not substitute fonts, distort the logo or modify the artwork.
